- › Simple, easy installation on existing pistol dovetail
- › No Batteries - No Switches - Always On- Always Ready
- › Nighttime Illumination guaranteed for 12 years

MEPRO FT BULLSEYE

Innovative Fiber-Tritium Optical Pistol Sight

Based on an optical illumination patent, the MEPRO FT Bullseye is an extremely small, low profile, optical pistol sight. Similar to reflex sights, using the MEPRO FT Bullseye provides the shooter with an aim point in the form of an illuminated dot and circle Bullseye. Shooters can enjoy intuitive and fast target acquisition.

The Fiber-optic Tritium combination enables instant and accurate shooting in all lighting conditions with no batteries needed.

The Fiber-optic used in bright light or day shooting, and the premium-grade Tritium provides instant illumination at night or in low-light conditions.

The MEPRO FT Bullseye installation is simple and easy on existing pistol dovetails, eliminates the need for a front sight and fits most existing holsters.

Responding to users need, our MEPRO FT Bullseye models are available for various pistols.
