

# MEPRO M21

## Day/Night Self-Illuminated Reflex Sight

The MIL-SPEC Mepro M21 Self-Illuminated Reflex Sight is used and trusted by militaries and law enforcement agencies worldwide. It is specifically unique, in that, no batteries are needed. Illumination of the point of aim reticle is achieved by a fiber optic collector system during the day and by a miniature self-powered tritium light source at night. A large 30mm display window allows the shooter to keep both eyes open for better battlefield situational awareness. The shooter has the option of five reticles - 4.3 MOA or 5.5 MOA dot Triangle, Bullseye, and Open X. Day or night, no matter the weather conditions with the Mepro M21, it is always on and always ready.

### Proven advantages:

- › No batteries – no switches – always ready for action
- › Large field of view, 30mm diameter lens
- › Effective use of sight under extreme conditions
- › Sight of choice of Armed Forces and Law Enforcement
- › Battle proven
