

MEPRO FRBS/FUBS

Self-Illuminated Flip Backup Sights

The self-illuminated Mepro FRBS and Mepro FUBS — Front and Rear Backup Sights—are known for their durability and ease of use. Constructed of fiberglass reinforced high-grade polymer and metal, the tough, tritium enhanced, secondary sights are designed to lay flat against the Picatinny rail to maintain a low profile, out of the way until needed. The rearward operating spring allows you to quickly flip them up into place when needed.

The elevation sight pin can be adjusted without tools. These low-profile, tritium-enhanced sights are available with either a two dot or four dot rear sight and quickly mount to any Picatinny rail. The night-time illumination is designed bright enough to see them but not too bright to impact sight picture. Day or night, if your main optic goes down, flip the FRBS or Mepro FUBS sights up and stay in the fight.

Available configurations:

- MEPRO FRBS M4D** - Front and Rear Set of Flip-up Sights with Tritium - 4 Rear Dots and Hyper Bright Front Sight.
- MEPRO FUBS M2D** - Front and Rear Set of Flip-up Sights with Tritium - 2 Rear Dots, and Tru-Dot Front sight.
